Version of Python: 2.7.13 Version of Spyder: 3.23

Description – Project 1: Creating a SQL database and then query it

Installation: Please install on your pc the latest version of Anaconda with Python 2.7 and the latest version of Spyder. The program was run in Windows 10 but it should work also if you use a Mac PC or a Linux distribution.

One can download the Anaconda / Python 2.7 / Spyder here:
https://www.anaconda.com/download/

Packages Used:

The following packages should be installed by the anaconda environment when possible or via through pip install package in anaconda prompt: pymysql, Pandas, Datetime. Also I used MariaDB. Please download MariaDB from:

https://mariadb.com/downloads/mariadb-tx

I have provided the CSV file with the tickers data. One can download it from:
